

RAFAEL KOCH PERES

Porto Alegre, Brazil · Remote (UTC-3) · rafaelkperes@gmail.com · +55 51 98154-6801 · linkedin.com/in/rafaelkperes

Senior backend engineer, 8 years in Go. Four years at Uber owning compliance-sensitive systems end to end — design through rollout through production incident — while leading a 10-engineer team; five years before that on the pipeline-execution engine behind SAP Data Intelligence. Depth in service migrations, durable workflows and extensible frameworks.

EXPERIENCE

Uber (via Truelogic) — United States, remote

Tech Lead, Talent Acquisition Engineering · Aug 2023 – Present

Promoted after nine months. Team of 10. Platform runs ~66k candidates and ~5k requisitions/month over 2.2M recruiting workflows. Scope grew from single projects to the integration layer of a company-wide ATS replatform.

- Designed the ATS-to-Scout sync layer for an iCIMS → Oracle HCM replatform: replaced a fire-on-any-status-change post-sync with per-status workflow registration on a Go-reflection core, and co-designed the main sync with a staff engineer — ingestion decoupled behind a Kafka topic, one workflow per record, isolating consumers from a failure-prone upstream extract.
- Owned that rollout through GA — freeze policy, feature flags, pilot, hypercare. Root-caused a **nine-deployment auto-rollback outage** (one hit production) to per-region cache divergence in the CD verification path; zero rollbacks after. Recovered a sync failure by replaying **194 batches / ~97k records**.
- Moved candidate email off the legacy ATS onto Uber's scheduling platform, one of three engineers. First week: **2,986 emails, 2,905 interview loops, 46 coordinators**; send time **2–5 min → 30 sec**; **manual-entry errors eliminated**; zero interruption through the cutover.
- Led the move of candidate sensitive-document handling off an external ATS into owned services, configurable forms across 60+ hiring locations, SLA-tracked contracts review. **Pushbacks down 37%**, complete-document offers **69% → 98%**, three milestones on a fixed deadline while onboarding five engineers.
- Technical owner for university-hiring standardization, delivered in **four months**: automated scorecard/debrief generation cut recruiter effort **~1h → ~10 min per candidate** across a **500+ intern/month** program.
- Held delivery through a **13 → 4 engineer contraction**, absorbing an abandoned Thrift → gRPC migration (**60+ endpoints**) after its lead departed and winding it down cleanly. Rebuilt onboarding one month → one week; set PR-review and test-plan standards.

Senior Software Engineer · Dec 2022 – Aug 2023

- Moved interview-loop submission — the service's most critical flow, fanning out to Calendar invites, Zoom and HackerRank provisioning and candidate notification behind branching eligibility rules — onto **Cadence durable workflows** with bounded retries that never re-execute completed side effects. Delivered inside an **8-month Python → Go rewrite**; became the platform's reliability primitive.

SAP — São Leopoldo, Brazil

Senior Software Developer · Dec 2021 – Nov 2022 · **Software Developer** · Jul 2018 – Nov 2021

- Built and led the **operators** layer of the Kubernetes-native data-pipeline engine behind SAP Data Intelligence — the pluggable graph-node framework customers compose into executable data flows. Owned the shipped connector suite: S3, SAP HANA and other SQL engines, Kafka, MQTT.
- Co-designed the inter-operator communication protocol: Go channels for operators sharing a process, a custom wire protocol across pods. Byte streaming let a pipeline hold a payload once rather than once per stage.

SKILLS

Languages Go (8 yrs) · TypeScript / JavaScript · Python · SQL

Backend & data gRPC · Thrift · Cadence · wire-protocol design · Kafka · MQTT · MySQL · SAP HANA · Elasticsearch · Redis · schema design & live migrations

Infrastructure Kubernetes · Docker · CI/CD · Buildkite · GitHub Actions · Bazel · Grafana · Jaeger

EDUCATION

B.S. Computer Engineering — Universidade Federal do Rio Grande do Sul · 2019 · exchange year, University of Stuttgart, Germany · 2016–17 · **PSPO I** — scrum.org
